a Normalized sensitivity spectrum (development)
Full calibrated (6)
Full fixed ratio (5)
No feedback (5)
Relative rank cutoff
Singular value / largest
Singular-value index
b Fitted positions and boundary constraints
τ_h
A
$K_{O,A}$
g
f_{SN}
ρ
Position within declared search interval
c Profile after refitting the other five quantities
Historical normalized ratio
Free-ratio fit
Reoptimized training RMSE (mg N L^{-1})
Fixed empirical ratio ρ
d Target fidelity on the same 750 cases
Full calibrated (6)
2.376
Full fixed ratio (5)
3.162
No feedback (5)
2.709
Polynomial ridge
5.636
RBF kernel ridge
2.751
Historical M2 (binary)
5.911
Development peak RMSE (mg N L^{-1})
